

ABDULLAYEV AZAMJON

FULL-STACK JAVASCRIPT DEVELOPER

Tashkent, Uzbekistan | +998 77 005 78 91 | azamjonbro@gmail.com | LinkedIn: linkedin.com/in/azamjonbro | GitHub: github.com/azamjonbro | Telegram: @azamjonbro

PROFESSIONAL SUMMARY

Full-Stack JavaScript Engineer specializing in Vue.js, Node.js, Express, and MongoDB architectures. Proven track record in engineering production web applications, cross-platform Electron desktop clients, and AI-driven business automation platforms. Experienced in architecting RESTful APIs, integrating LLMs, optimizing client-side rendering performance, and building low-latency data pipelines.

TECHNICAL SKILLS

Frontend:	JavaScript (ES6+), Vue.js (Vue 3/Pinia), Nuxt.js, React.js, Tailwind CSS, HTML5/CSS3
Backend:	Node.js, Express.js, RESTful APIs, System Architecture, Authentication (JWT/OAuth)
Databases:	MongoDB, Mongoose ORM, Database Indexing & Query Optimization
Desktop & Hardware:	Electron.js, Real-Time Data Streams, Serial Communication Protocols
AI & Integrations:	OpenAI API, Telegram Bot & Web App APIs, Notion API, Google Calendar API
DevOps & Tools:	Git, GitHub, Nginx, Linux Server Administration, CI/CD Baselines

PROFESSIONAL EXPERIENCE

Alpha Electronics | Frontend Engineer May 2024 – Oct 2024

- Architected a cross-platform Electron.js/Vue.js desktop application for real-time industrial power and energy monitoring across Windows, Linux, and macOS.
- Built low-latency data visualization components processing continuous data streams directly from smart energy meters and hardware sensors.
- Engineered a modular enterprise CRM in Vue.js, reducing dashboard load times and streamlining client device operational monitoring.

Ubaytools MCHJ | Frontend Engineer Dec 2023 – May 2024

- Developed an e-commerce platform using React.js, implementing efficient state management for multi-category product catalogs and transaction workflows.
- Built an interactive Telegram Web App and automated Node.js bot service to enable direct mobile ordering and customer support handling.
- Designed and consumed structured RESTful API schemas in collaboration with backend teams to optimize client-side data fetching and caching.

Algorithm Education Center | Software Engineer & Technical Assessor Dec 2024 – Present

- Conducted technical interviews and coding assessments for prospective JavaScript/Vue.js engineers, evaluating code quality, data structures, and system design skills.
- Conducted structured code reviews and architectural evaluations for production-bound web applications.

SELECTED PROJECTS

AIVA — AI Executive Workspace

Tech Stack: Vue.js, Node.js, Express.js, MongoDB, OpenAI API, Notion API, Google Calendar API, Telegram API

- Engineered an enterprise AI workspace automating business operations through asynchronous LLM function execution and contextual processing.
- Integrated multi-service pipelines connecting OpenAI APIs with Notion, Google Calendar, and Telegram platforms into a unified workflow interface.
- Built long-term conversation memory, autonomous task scheduling, document extraction, and analytics engines.
- Deployed to production for flagship client Store Hadiya, streamlining daily executive and retail operations.

IOTICS — Industrial Energy Monitoring Platform

Tech Stack: Vue.js, Electron.js, Node.js, Express.js, MongoDB

- Developed a multi-platform desktop application monitoring high-frequency industrial power consumption metrics.
- Implemented alert processing systems, historical data logging, and interactive graphical analytics for hardware diagnostics.
- Built custom CRM administration panels for device lifecycle management and operator access control.

Algoritm Enterprise EMS Platform

Tech Stack: Vue.js, Node.js, Express.js, MongoDB

- Built a multi-tenant education management system handling academic scheduling, student tracking, attendance monitoring, and multi-role access (RBAC).
- Designed localized i18n modules enabling multi-language administrative interfaces.
- Optimized MongoDB query structures and indexed collections to sustain high concurrent user activity.

Safonon — Production & Bakery CRM Platform

Tech Stack: Vue.js, Node.js, Express.js, MongoDB

- Architected a specialized operational CRM for managing bakery production output, automated payroll calculations, and advance payment ledgers.
- Built lightweight UI components using vanilla CSS and Vue without third-party UI framework overhead, minimizing bundle size and execution latency.
- Developed a license-based authentication and entitlement system ensuring data integrity and long-term history retention.

Dacha Booking Platform

Tech Stack: Vue.js, Node.js, Express.js, MongoDB

- Developed a production reservation platform featuring dynamic seasonal pricing engines, calendar availability tracking, and booking administration dashboards.
- Authored RESTful endpoints with secure transactional logic to prevent overbooking and process concurrent reservation requests.

EDUCATION & CERTIFICATIONS

Najot Ta'lim Education Center — Specialization in Web Development (5-Month Intensive)
